

The all-new Waffle Baffle from SilentFiber™ is made up of high-density, ½" thick polyester (PET) board. Not only do these baffles feature an eye-grabbing, modern design, but they also perform extremely well acoustically. This ceiling suspended baffle is used to absorb unwanted noises reflecting off ceiling surfaces. Airborne noise can negatively affect frequencies within human voice ranges, disrupting the sound field and making it more difficult to listen attentively. The SilentFiber™ Waffle Baffle is able to knock down airborne noise and add clarity to the sound field.

The SilentFiber™ Waffle Baffle features (6) 4' x 1' x ½" polyester panels – precision-cut to be inserted and friction-fit into one another, (4) grommets, and (4) cable hangers for installation. The pre-inserted grommets and included cable hangers allow for simple installation in seconds. Transform the acoustics and aesthetics in any room, and hear the difference the SilentFiber™ Waffle Baffles can make.

#### Specifications:

- Recycled content: 60% post-consumer content, 100% recyclable
- Acoustically rated for sound absorption (NRC: 0.40)\*
- Class A fire rated
- Impact resistant: will not expand, shrink or warp with time
